

No. of Functional Features Included in the Solution

AI-Assisted Smart Budget Planner

S.No	Feature Name	Feature Description	Module / Component	Status
1	Registration	Create user account.	auth.py / main.py	Implemented
2	Login / Session	Authenticate and manage session/JWT.	auth.py / main.py	Implemented
3	Home Planner	Generate budgeted home item plan.	planner.py / main.py	Implemented
4	Party Planner	Generate event budget plan.	planner.py / main.py	Implemented
5	Jewelry Planner	Generate jewelry plan using occasion/style/color.	planner.py / main.py	Implemented
6	Outfit Image Validation	Validate optional JPEG/PNG/WebP image ≤3 MB.	main.py	Implemented
7	Gemini Commentary	Optional one-line AI insight.	gemini.py	Implemented / Optional
8	Plan History	Save and retrieve plans.	db.py / main.py	Implemented
9	Merchant Search Links	Generate outgoing search URLs.	planner.py	Implemented
10	Automated Testing	Test auth, planners, budget caps and image validation.	tests/test_app.py	Implemented

Feature Summary

Metric	Count / Value	Status
Total Features Planned	10	Documented
Total Features Implemented	10	Implemented in the supplied project/report scope
Core / Must-Have Features	Authentication, three planners, budget cap, history	Done
Additional / Nice-to-Have	Optional Gemini commentary and outfit image	Implemented / Optional
Features Tested & Verified	Authentication, planners, budget caps, image validation	Covered by automated test scope

Feature Category Breakdown

Category	Examples
User Interface (UI)	Static HTML/CSS/JavaScript planner interface.
Backend / Logic	FastAPI routes and deterministic packing engine.
Database / Storage	SQLite users and saved plans.
API / Integration	Gemini via HTTPX and outgoing merchant search links.
Security / Authentication	script, HTTP-only cookies, JWT.
