

Performance Testing

AI-Assisted Smart Budget Planner

Testing Overview

Field	Details
Testing Tool Used	Pytest for automated functional tests. No dedicated load-testing tool is documented in the supplied report.
Type of Testing	Functional / automated test coverage. Dedicated load/stress measurements are not documented.
Target Modules / APIs	Registration, login, Home/Party/Jewelry planners, budget caps, image validation.
Test Environment	Local FastAPI application.
Test Date	29 September 2026

Test Scenarios

S.No	Test Scenario / Description	Expected Outcome	Evidence / Status
1	Register a user	Account is created successfully.	Automated test scope
2	Login	Valid credentials create an authenticated session.	Automated test scope
3	Generate Home plan	Itemized result stays within budget.	Automated test scope
4	Generate Party plan	Itemized result stays within budget.	Automated test scope
5	Generate Jewelry plan	Itemized result stays within budget.	Automated test scope
6	Budget cap	Total never exceeds requested budget.	Automated test scope
7	Image validation	Only supported image type/size is accepted.	Automated test scope

Performance Result Limitation

The supplied project report does not provide measured response-time, throughput, virtual-user, or load-test results. Those values are therefore not invented here.
